

IMPORTANT MANAGEMENT STATEMENT ON THE CORONA VIRUS PANDEMIC

Status Quo Delivery Performance of the BRÖER Group

Dear customers,
dear business partners,

due to the current developments of the corona virus pandemic we consider it our duty to inform you about the current status quo of our international delivery performance in the BRÖER Group (EBRO / STAFSJÖ) in order to offer you the greatest possible planning security.

Due to our long-term global production and stocking strategies within the Bröer Group, there are currently no critical effects on our production sites and our delivery performance. Our permanent, foresighted and comprehensive monitoring of the inventory and delivery situation gives you the certainty that there will be no delivery bottlenecks in our standard product portfolio (industrial valves, actuators and automation technology) in the coming weeks and months. The delivery times for special valves are also not affected by the current situation, but should be checked again in your interest in each individual case.

As soon as we have information concerning the further development of the corona virus pandemic (i. e. factors that cannot be influenced by us), we will reassess our ability to deliver accordingly and inform you proactively and immediately.

We are in constant communication with our internal prevention team, which was founded specifically for this purpose, in order to initiate all necessary measures to adapt to changing circumstances.

As part of these preventative measures, all business travel that would take place by air or rail is currently suspended until the end of April. The regular visit of our field service team is not affected by this at present and will be available to you personally as usual. Visits by business partners who would travel by air or rail are cancelled indefinitely in order to minimise the risks and also to provide the best possible preventive protection for our employees.

Yours faithfully
